

Identity and Access Management

“The essential user management platform that every IT Support person in education should have in their toolkit.”

Product Brochure

Service overview

RM Unify is an online Identity Management and single sign-on platform that makes setting up access to online applications a breeze. Providing quick and easy administration and access to Microsoft 365, Google Workspace, plus a whole host of other content... without fuss.

This accelerates locating the resources you need and bringing everything together into one place, with just one username and password for everything.

How it works

Every student, teacher and other staff member in school has an RM Unify account, which is managed automatically from the school Active Directory (AD) or MIS.

Once logged onto the school network, they access their online resources, including Microsoft 365 and Google Workspace, without the need to log in again.

Feature	Benefit
Access to hundreds of online resources via a simple cloud desktop.	Fast and consistent access from all devices.
One username and password.	Speedy and manageable login process.
Provision user accounts and groups from school Active Directory and MIS.	Automation of user account creation and collaboration groups – saves time.
Federate RM Unify accounts to multiple school email domains for Microsoft 365 and Google Workspace.	Increased productivity between pupils, staff, and across multiple school sites, even from home.
Connect existing online applications from an education app library and browse for new ones.	Easily evaluate online resources mapped to curriculum areas and school development priorities e.g. parental engagement.

A single management platform. Ideal for everyone in your school community including, but not limited to students, staff, governors, and parents

Network Provisioning

Driving user provisioning to RM Unify from your MIS as the single point of truth, you can then enable the network provisioning service to create user accounts on your local AD. This **removes the manual overhead** of separately maintaining these records as all user creation is now managed at the point entry to the MIS. Additionally, this will remove the chance of human error when it comes to data accuracy. Users on the local AD will be disabled once they are marked as off roll in your MIS making the clean up of the accounts easier.

Integration

Take away the burden of manually provisioning the user accounts into your Microsoft/Google tenancy so that as soon as someone joins your school, the **account will get created automatically**. This process will also enable the single sign-on for your users to Microsoft/Google through their RM Unify Launch Pad.

Likewise, when people leave the school RM Unify will ensure that the user account is disabled, and they can no longer access potentially sensitive data in your tenancy.

Spend less time setting up user accounts and resetting passwords

Security

RM Unify acts as the front door that stands between your users and their digital resources. One of the challenges that network managers face is balancing security with user experience. Why compromise? We have created the perfect balance between the two.

We use the most common form of authentication, the username and password which is familiar and accessible by all. The benefits of Single Sign On is that **your users only need remember one username and password** to access everything. Additionally, the use of Multi-Factor Authentication (MFA) can give your users the extra level of security you need.

Launch Pad

The Launch Pad provides users with a single point of access for **all their digital resources**. This makes life easier, as they no longer need to hunt around to find the day to day applications they need.

For admins and school leaders, the Launch Pad enables the curation of content specifically for the different user types in your school. Add tiles to user's Launch Pads by either searching our app library for hundreds of educationally approved resources, or simply add your own link tiles such as bespoke school or class content with just a few clicks.
